Summary : Free circuits and systems for wireless communications pdf download - this book contains revised contributions by the speakers of the 1st ieee workshop on wireless communication circuits and systems held in lucerne switzerland from june 22-24 1998 the aim of the workshop was to demonstrate the vast expertise of the cas society in the area of circuit and system design to the rapidly growing field of wireless communications the workshop combined presentations by invited experts from academia and industry with panel and informal discussions the following topics were covered rf system integration single-chip systems cmos rf circuits rf front-end circuits cmos rf oscillators broadband design techniques wideband conversion for software radio a d conversion issues wideband sub-sampling low-spurious a d conversion process technologies for future rf systems si sige gaas cmos packaging technologies dsp for wireless communications dsp algorithms fixed-point systems dsp for baseband applications blind channel equalization adaptive interference suppression design techniques channel estimation a carefully selected combination of tutorial-like papers as well as papers on specialized and advanced topics is included thus newcomers to the field of wireless communications will benefit from the overview of emerging technologies in circuits and systems and specialists will benefit from the thought-provoking details presented in this book
