Summary : Free nanotechnology in catalysis volumes 1 and 2 pdf download - this book is mainly based on the first and second symposia on nanotechnology in catalysis held in 2001 and 2002 but it also includes several contributions not presented in the symposia to round out the scope of the subject the contents are the most up to date developments made by researchers all over the world in the catalysis field in this fascinating nanotechnology era it reflects some of the frontier areas of nanoscience and nanotechnology in fabricating and characterizing catalysts and carrying out studies to prove their superior selectivity and activity the field of application of nanotechnology for the development of catalysts for green chemistry is likely to grow rapidly during the next decade this book hopes to contribute to the evolution of nanotechnology in that direction
