Summary : Free peer review in scientific publications pdf download - this report indicates that the oversight of research integrity in the uk is unsatisfactory the science and technology committee concludes that in order to allow others to repeat and build on experiments researchers should aim for the gold standard of making their data fully disclosed and made publicly available the report examines the current peer-review system as used in scientific publications and the related issues of research impact data management publication ethics and research integrity the uk does not seem to have an oversight body for research integrity covering advice and assurance functions across all disciplines and the committee recommends the creation of an external regulator it also says all uk research institutions should have a specific member of staff leading on research integrity the report highlights concerns about the use of journal impact factor as a proxy measure for the quality of research or of individual articles innovative ways to improve current pre-publication peer-review practices are highlighted in the report including the use of pre-print servers open peer review increased transparency and online repository-style journals the growth of post-publication peer review and commentary also represents an enormous opportunity for experimentation with new media and social networking tools which the committee encourages there should also be greater recognition of the work-sometimes considered to be a burden-carried out by reviewers by both publishers and employers in order to do this publishers need to have in place systems for recording and acknowledging the contribution of those involved in peer review
