IBM z/OS V2R1 Communications Server  
TCP/IP Implementation Volume 3: High  
Availability, Scalability, and Performance

Describes z/OS Communications Server  
TCP/IP high availability capabilities  
Includes TCP/IP high availability  
implementation examples  
Provides insights into  
performance and tuning

Availability Scalability And Performance PDF](#)

**Summary :** Free ibm z os v2r1 communications server tcp ip implementation volume 3 high availability scalability and performance pdf download - for more than 40 years ibm mainframes have supported an extraordinary portion of the world s computing work providing centralized corporate databases and mission-critical enterprise-wide applications ibm system z the latest generation of the ibm distinguished family of mainframe systems has come a long way from its ibm system 360 heritage likewise its ibm z os operating system is far superior to its predecessors in providing among many other capabilities world-class and state-of-the-art support for the tcp ip internet protocol suite tcp ip is a large and evolving collection of communication protocols managed by the internet engineering task force ietf an open volunteer organization because of its openness the tcp ip protocol suite has become the foundation for the set of technologies that form the basis of the internet the convergence of ibm mainframe capabilities with internet technology connectivity and standards particularly tcp ip is dramatically changing information technology and driving requirements for even more secure scalable and highly available mainframe tcp ip implementations the ibm z os communications server tcp ip implementation series provides understandable step-by-step guidance for enabling the most commonly used and important functions of z os communications server tcp ip this ibm redbooks publication is for people who install and support z os communications server it starts by describing virtual ip addressing vipa for high-availability with and without a dynamic routing protocol it describes several workload balancing approaches with the z os communications server it also explains optimized sysplex distributor intra-sysplex load balancing this function represents improved application support using optimized local connections together with weight values from extended workload manager

wlm interfaces finally this book highlights important tuning parameters and suggests parameter values to maximize performance in many client installations
