

A Combined MRI And Histology Atlas Of The Rhesus Monkey Brain In Stereotaxic Coordinates

Author : Kadharbatcha S Saleem Nikos K Logothetis /

Category : Medical / **Total Pages :** 389 pages

[Download A Combined MRI And Histology Atlas Of The Rhesus Monkey Brain In Stereotaxic Coordinates PDF](#)

Summary : Free a combined mri and histology atlas of the rhesus monkey brain in stereotaxic coordinates pdf download - the second edition of this atlas maps the detailed architectonic subdivisions of the cortical and subcortical areas in the macaque monkey brain using high-resolution magnetic resonance mr images and the corresponding histology sections in the same animal this edition of the atlas is unlike anything else available as it includes the detailed cyto- and chemoarchitectonic delineations of the brain areas in all three planes of sections horizontal coronal and sagittal that are derived from the same animal this is a significant progress because in functional imaging studies such as fmri both the horizontal and sagittal planes of sections are often the preferred planes given that multiple functionally active regions can be visualized simultaneously in a single horizontal or sagittal section this combined mri and histology atlas is designed to provide an easy-to-use reference for anatomical and physiological studies in macaque monkeys and in functional-imaging studies in human and non-human primates using fmri and pet the first rhesus monkey brain atlas with horizontal coronal and sagittal planes of sections derived from the same animal shows the first detailed delineations of the cortical and subcortical areas in horizontal coronal and sagittal plane of sections in the same animal using different staining methods horizontal series illustrates the dorsoventral extent of the left hemisphere in 47 horizontal mri and photomicrographic sections matched with 47 detailed diagrams chapter 3 coronal series presents the full rostrocaudal extent of the right hemisphere in 76 coronal mri and photomicrographic sections with 76 corresponding drawings chapter 4 sagittal series shows the complete mediolateral extent of the left hemisphere in 30 sagittal mri sections with 30 corresponding drawings chapter 5 the sagittal series also illustrates the location of different fiber tracts in the white matter individual variability - provides selected cortical and subcortical areas in three-dimensional mri horizontal coronal and sagittal mri planes for comparison it also provides similar areas in coronal mri section in six other

monkeys chapter 6 vasculature - indicates the corresponding location of all major blood vessels in horizontal coronal and sagittal series of sections provides updated information on the cortical and subcortical areas such as architectonic areas and nomenclature with references in chapter 2 provides the stereotaxic grid derived from the in-vivo mr image
