Summary : Free somatic embryogenesis and synthetic seed ii pdf download - while working in the laboratory of professor dr jacob reinert at the freie universitat berlin 1974-1976 i had the opportunity to become deeply involved in studying the intricacies of the fascinating phenomenon of somatic embryogenesis in plant cells and protoplasts in numerous stimulating discussions with professor reinert on this subject i was fully convinced that somatic embryogenesis would become one of the most important areas of study not only regarding basic and fundamental aspects but also for its application in crop improvement during the last decade we have witnessed tremendous interest and achievements in the use of somatic embryos for the production of synthetic seeds for micro propagation genetic transformation cryopreservation and conservation of germplasm the en masse production of somatic embryos in the bioreactors has facilitated some of these studies somatic embryos have now been induced in more than 300 plant species belonging to a wide range of families it was therefore felt that a compilation of literature state of the art on this subject was necessary thus two volumes on somatic embryogenesis and synthetic seed have been compiled which contain 65 chapters contributed by international experts somatic embryogenesis and synthetic seed i comprises 31 chapters arranged in 3 sections section i commitment of the cell to somatic embryogenesis early events anatomy molecular basis gene expression role of polyamines machine vision analysis of somatic embryos section ii applications of somatic embryos technology of synthetic seed fluid drilling micropropagation genetic transformation through somatic embryos cryopreservation
