Summary : Free soft computing in measurement and information acquisition pdf download - the vigorous development of the internet and other information technologies have significantly expanded the amount and variety of sources of information available on decision making this book presents the current trends of soft computing applications to the fields of measurements and information acquisition main topics are the production and presentation of information including multimedia virtual environment and computer animation as well as the improvement of decisions made on the basis of this information in various applications ranging from engineering to business in order to make high-quality decisions one has to fuse information of different kinds from a variety of sources with differing degrees of reliability and uncertainty the necessity to use intelligent methodologies in the analysis of such systems is demonstrated as well as the inspiring relation of computational intelligence to its natural counterpart this book includes several contributions demonstrating a further movement towards the interdisciplinary collaboration of the biological and computer sciences with examples from biology and robotics
